

## CLIMATE CHANGE STATEMENT

Capital acknowledges that climate change poses a significant threat to the environment on a global level. We consider climate change, including shifts in temperature, precipitation and more frequent weather events, to be one of the principal risks facing the group and are proactively working to integrate more sustainable solutions into our operations and throughout our business.

As a responsible global business, we are committed to delivering our services in a safe and efficient manner, and to playing our part in helping address and mitigate the worst impacts of climate change.

In 2021, we implemented a climate change strategy, through which we continually seek to reduce the carbon intensity of our operations and, where possible, our client's operations, through innovation, efficiency improvements and lower energy use.

We are currently developing an action plan to address the transition to net zero emissions and, during 2022, we are aiming to set an emissions reduction target for 2030.
